SUMMARY

Gameplay programmer and Digital Game Design graduate with studio internship experience developing a mobile casual puzzle game in Unity. Hands-on with core gameplay systems across genres, including grid-based puzzles, platformer / shooter hybrids, and isometric action-RPG systems, plus backend skills (ASP.NET Core, REST APIs, real-time matchmaking) for game services. Seeking a junior gameplay / game developer role.

EDUCATION

Istinye University — Bachelor's Degree, Digital Game Design · GPA 3.21 / 4.00

Istanbul · 2022 – 2026

EXPERIENCE

Game Developer Intern · Asteri Game Studio (*KPlus Bilişim Teknolojileri A.Ş.*)

Istanbul · Jun 2025 – Oct 2025

- Developed **Merge Vacuum**, a mobile casual puzzle game in Unity (C#, URP), implementing the core puzzle loop: drag-and-drop grid interaction, match detection, and collapse / refill logic.
- Built level-objective systems including collector goals, multi-objective levels, and ice obstacles, plus boosters and tutorial hint flow.
- Developed the full game-state UI flow (gameplay, victory, defeat, objective feedback) with Unity UI and TextMeshPro across a 100+ script codebase.
- Modeled missing 3D props (crates and other in-game objects) in Autodesk Maya and integrated them into the game to complete the existing 2D asset set.
- Additionally contributed to backend development at KPlus, building and testing REST API features with C#, ASP.NET Core, and SQL.

PROJECTS

Apollo — Unity, C#, URP, Unity Input System · github.com/Efekoo/APOLLO

- Hybrid 2D platformer / space shooter with planet selection, mission phases, resource collection, and ship-upgrade progression.
- Implemented global game-state and scene-transition systems, player movement, enemy spawning, and upgrade mechanics across a 100+ script codebase.

Seven Layers of Carnage — Unity, C#, URP, Unity Input System · github.com/Efekoo/SE7EN

- 2D isometric action-RPG inspired by Dante's Inferno, with layered level progression and boss encounters.
- Built inventory, hotbar, loot, crafting, shop, and quest-tracking systems along with the core combat and progression flow.

MatchForge — Real-Time Matchmaking & Lobby Service — ASP.NET Core, SignalR, Redis, PostgreSQL, Docker · github.com/Efekoo/MatchForge

- The backend behind competitive multiplayer: skill-based matchmaking with expanding Elo/MMR windows, real-time SignalR lobbies with reconnect handling, and Redis distributed locks; load-tested with **1,000 concurrent players (p95 match time 2.0 s, 0% failed requests)**.

Game Services API — ASP.NET Core Web API, C#, EF Core, PostgreSQL, SignalR, Docker · github.com/Efekoo/Game_Services_API · [live demo](#)

- Backend API for game systems (authentication, player progression, inventory, market economy, friends, and leaderboards) with a SignalR real-time leaderboard, Docker Compose setup, and a CI-tested codebase (24 xUnit tests); directly applicable to live-service game backends.

TECHNICAL SKILLS

- Game Development:** Unity, C#, Universal Render Pipeline, Unity Input System, Unity UI, 2D gameplay systems (grid puzzles, platformers, isometric ARPG)
- Backend for Games:** ASP.NET Core, Entity Framework Core, REST APIs, PostgreSQL, Redis, SignalR, JWT Authentication, Docker
- AI & Scripting:** Python, LangGraph, Google Gemini API
- Tools:** Git, Autodesk Maya (3D asset modeling)
